

Science School Principles

We know good science teaching occurs in our school when.....

June 2018

- When we take the lead and think of our own practical ways to test an idea.
- When assessment is used to show what we know and where teachers need to help us.
- When we feel confident to ask questions and are interested to find out more about the subject.
- When visitors come into school and inspire us to learn about how science is used in everyday life.
- When children have opportunities to think about what they have learnt and how they can develop their own learning.
- When science is well planned and made interesting for everyone.
- When we are involved in science experiments that are made exciting.
- When there is a wide variety of equipment for us to use.
- When we do lots of investigations and experiments.
- When we do buddy science .
- When Science is fun and we are given the chance to join in.
